

Bug ID	Title	Steps to Reproduce	Expected Result	Actual Result	Severity	Suspected Cause
BUG-001	Application crashes when API request fails	1. Start the application. 2. Open the home page. 3. Allow API request to fail.	Application should display a user-friendly error message and continue functioning.	Application crashes with an unhandled exception.	Critical	API failure is not handled properly and causes a runtime crash.
BUG-002	Missing validation for error.response.body	1. Trigger an API failure. 2. Observe application behavior.	Application should validate the response object before accessing its properties.	Error: "Cannot read properties of undefined (reading 'body')".	Critical	Missing null/undefined check before accessing error.response.body.
BUG-003	Tags API request blocked by CORS	1. Launch application. 2. Open browser console. 3. Monitor network requests.	Tags should be fetched and displayed successfully.	API request is blocked by CORS policy and tags are not loaded.	High	Backend API does not return required CORS headers.
BUG-004	Application crashes when	1. Open application while	Application should display an	Error: "Cannot read properties of	High	Missing validation before accessing

	tags data is unavailable	Tags API request fails. 2. Load home page.	empty tag list or fallback message.	undefined (reading 'tags')".		action.payload[0].tags.
BUG-005	Application crashes when articles data is unavailable	1. Open application when Articles API request fails. 2. Load article feed.	Application should show an empty article list or error message.	Error: "Cannot read properties of undefined (reading 'articles')".	High	Missing null check before accessing article data from API response.
BUG-006	Application crashes when articlesCount is unavailable	1. Open application while article API response is missing. 2. Load article feed.	Application should default articlesCount to 0 and continue loading.	Error: "Cannot read properties of undefined (reading 'articlesCount')".	High	Missing validation before accessing articlesCount property.
BUG-007	Main stylesheet file not found	1. Open application. 2. Inspect Network tab in browser developer tools.	main.css should load successfully.	main.css returns HTTP 404 Not Found.	Medium	Incorrect file path or missing stylesheet file in project configuration.

Bug ID	Title	Steps to Reproduce	Expected Result	Actual Result	Severity	Suspected Cause
BUG-008	User registration request fails	1. Navigate to Register page. 2. Enter valid user details. 3. Click Sign Up.	User account should be created successfully.	POST request to /users fails with net::ERR_FAILED.	Critical	API endpoint unavailable, blocked, or incompatible with current frontend implementation.

Root Cause Analysis:

The main issue in the application is improper error handling and missing validation checks for API responses.

Most crashes occur when the application tries to access properties of undefined objects returned from failed API calls.

There is also a lack of fallback UI states when backend data is unavailable.

Additionally, missing CORS configuration causes API requests to fail in the browser.

To fix this, proper null checks, try-catch blocks, and default state values should be implemented across API handlers.
